

THE #1 MARINE TECHNOLOGY NETWORK

ABOUT MARINE TECHNOLOGY REPORTER

Marine Technology Reporter is the industry's largest circulating magazine dedicated to the underwater technology and ocean science markets. From the surface to the sub-seafloor MTR provides unbiased news and information on equipment, systems and platforms for use in everything from hydrographic and oceanographic research to defense and renewable energy.

Marine Technology Reporter is proud to maintain a 100% BPA Audited Circulation, and is currently the only audited underwater technology magazine serving the subsea market.

Not all publications have audience numbers that are audited and verified. Some publishers today even inflate their numbers to include pass-along circulation and/or unsubstantiated conference copies.

Let us show you what a real audited circulation can do for your business.

The World's Largest Marine Technology Audience

Marine Technology Reporter is the industry's largest circulating and only audited magazine dedicated to the underwater workspace.
