JCY Cylindrical Fenders

Cylindrical Fenders are simple to install and operate which makes these units an economical solution for remote locations and for multi user berths where vessel types cannot always be predicted.

Their progressive load-deflection characteristics make the same fender suitable for both large and small vessels, and with a wide choice of sizes and diameter ratios, performance can be closely matched to requirements in each case.

Cylindrical fenders can be fixed to many types of structure and attached in several different ways – horizontally, vertically or diagonally and can also be adapted to suit wharf corners. The fenders are suspended either by chains, support bars or brackets depending on their size and intended application.

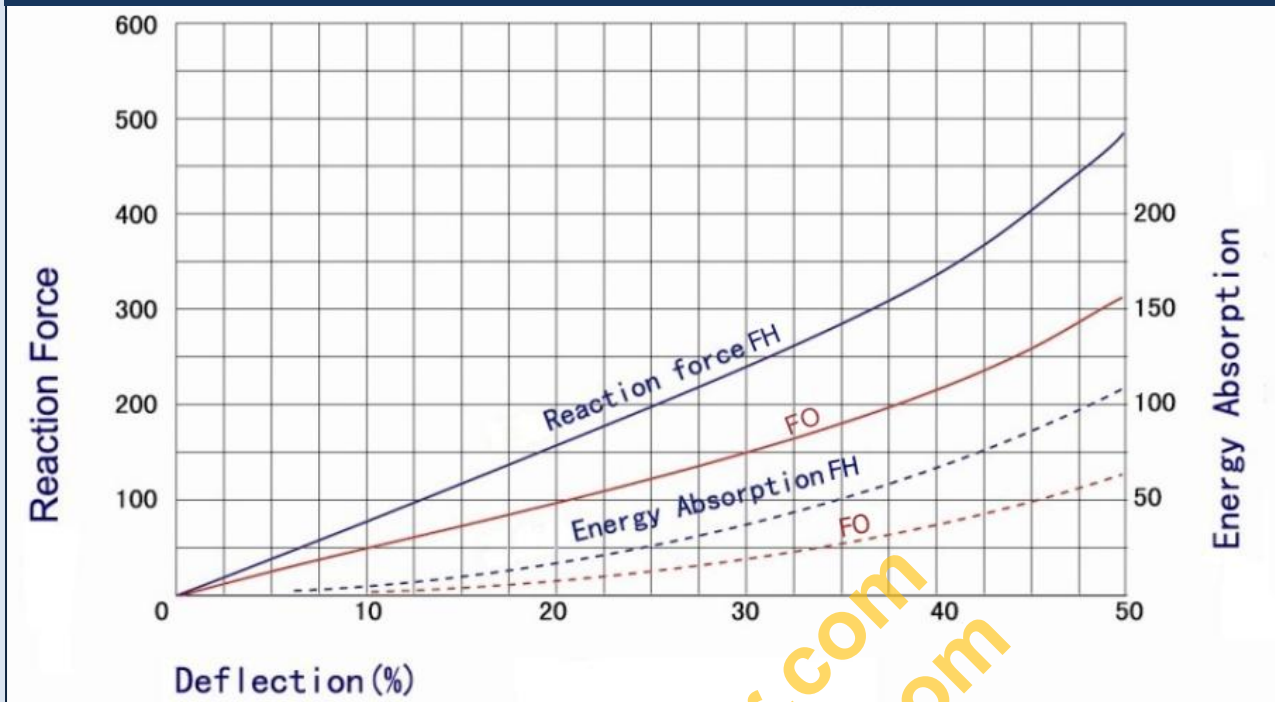

Core Attributes

- ◆ Simple and economical design, easy to install
- ◆ Choice of mounting systems to suit different structures and applications
- ◆ Sizes from 150mm to 2000mm diameter in almost any length
- ◆ Thick fender wall resists abrasion, even after years of heavy use
